

How to clean & care for your Towels & Pads

1. 2. 3. 4.

Wash – Dry – Inspect – Bag until use

It is important to use soft high quality towels and pads. Low quality cotton and microfiber towels/pads could damage your finish. We recommend only using microfiber or 100% cotton towels.

We recommend the following:

1. Wash your towels after each use using cold or warm water
2. Use liquid laundry detergent (avoid powder detergent)
3. Use half the recommended amount of liquid detergent
4. Do not use fabric softener liquid or sheets
5. Air dry or machine dry on a low heat setting
6. When machine drying, remove towels just before they are completely dry to avoid static cling
7. Thoroughly inspect both sides of each towel or pad for foreign matter that may have become imbedded into the material.
8. Try to keep towels used on your vehicles separate from those used to clean floors or any other surface prone to having material that can become trapped in the towels or pads. This includes keeping them separate when washing.
9. Do not use towels that have been used in a machine or wood shop or wash towels with those that have been used in these locations.
10. After towels have been washed and inspected, store them in a sealed container or bag, free of any dirt.
