

How to clean fabric seats and carpets

1. 2. 3.
Spray On -- Damp Towel -- Dry Towel

1. Vacuum the area to be cleaned
2. Take two towels and fold them in half twice to make a square. Wet one with fresh water and wring it out until it is only damp.
3. Spray the area to be cleaned with cabin cleaner
4. Rub the area with the damp towel, unfolding the square to expose clean sides, until the towel shows no signs of dirt.
5. Rub the area with the dry towel.
6. Allow time for fabric to dry.

NOTE:

The damp towel method removes both the dirt and the soap. Using a damp towel cleans and rinses the fabric without forcing dirt and moisture deeper into the material, which can cause odors and corrosion.
